

Exercise sheet 1, 17 November 2016

There are several nice tools online for cryptanalysis of classical systems, e.g.

<http://www.braingle.com/brainteasers/codes/index.php>

<http://www.cryptool-online.org>

<http://axion.physics.ubc.ca/cbw.html>

Once upon a time I helped to make <https://www.mysterytwisterc3.org/en/old-mystery-twister-games/> where you can find many more examples

See below for some frequency distribution.

1. The following text was encrypted using the Caesar cipher. Find the plain-text.

aopza leapz huleh twslv muvyt hsale azvao lbzbh skpza ypiba pvuzv
mjoyh hjaly zmvyt unspz oalea zovbs kovsk

2. The following text was encrypted using the Caesar cipher. Find the plain-text.

drovo ddoba nyocx ydkzz okbyp doxex voccs xaekb dobae kbkxd sxoae
oloma ekbdj ybaek cskbd spsms kvaeo cdsyx c

3. The following text was encrypted using the Vigenère cipher. Find the plaintext.

evtdw dlagsz fepll xdwpk tevlg scjgs zfevs jecdp sszkp yqcjd etcyl
boosn cmaew zykzc ypgsy hvpyc yprzp gyzhs ljpev pvsj

4. The following text was encrypted using the Vigenère cipher. Find the plaintext.

xnuju dkrvr shdmr vjbkl ehlwx ofued yhgik siskk ddgxa btrsi fyxmnn

5. The following text was encrypted using the Playfair cipher with keyword MATHEMATICS. Decrypt the message.

gc lz po nt au tc ad uh st

6. The Hill cipher is a secret-key system based on matrices. It takes a message in the English alphabet (26 characters), translates the characters into numbers as given below, and then encrypts the message by encrypting n numbers at a time as follows:

Let the secret key M be an $n \times n$ matrix over $\mathbb{Z}/26\mathbb{Z}$ which is invertible and let the plaintext a be the vector $(a_1, a_2, \dots, a_n) \in (\mathbb{Z}/26\mathbb{Z})^n$. The corresponding ciphertext is $c^T = Ma^T$. To decrypt compute $a^T = M^{-1}c^T$.

(a) Let

$$M = \begin{pmatrix} 2 & 1 & 1 \\ 1 & 3 & 2 \\ 1 & 3 & 1 \end{pmatrix}.$$

Encrypt the text CRY PTO

- (b) Let M be a 2×2 matrix. You know that $(1, 3)^T$ was encrypted as $(-9, -2)^T$ and that $(7, 2)^T$ was encrypted as $(-2, 9)^T$. Find the secret key M .

A	B	C	D	E	F	G	H	I	J	K	L	M
0	1	2	3	4	5	6	7	8	9	10	11	12
N	O	P	Q	R	S	T	U	V	W	X	Y	Z
13	14	15	16	17	18	19	20	21	22	23	24	25

Probability distributions of 1-grams in English, from Henk van Tilborg “Fundamentals of cryptology”, page 5. Boldfacing of values larger than 0.06 by me. Note the probabilities of e and the triple r,s, and t.
